

What is a Fire Learning Network (FLN)?

- A landscape-scale collaborative effort to accelerate the restoration of fire-adapted ecosystems
- A nationwide effort that operates through regional and local partnerships
- Funded by the National Fire Plan

The Southern Blue Ridge FLN:

- Initiated in 2007 by a diverse group of partners including federal and state agencies, Universities, and NGOs including The Nature Conservancy
- Comprised of 7.7 acres of public and private land in the Southern Appalachian Highlands, USA
- **Our vision:** To increase the capacity for prescribed burning and improve the collective ability to achieve meaningful fuel reduction and ecological restoration objectives

Where are we working?

- The Southern Blue Ridge FLN features 7 distinct "Landscapes" and 4 "Focal Areas" where collaborative projects are being implemented.

The Collaborative Process

Step 1. Through a series of workshops, partners identified 4 fire-adapted forest communities:

Conceptual models were created for each of the fire-adapted communities to document the state of the knowledge and to guide development of desired future conditions.

Step 2. A landscape model was used to determine the relative amounts of each fire-adapted community within the Southern Blue Ridge FLN Landscapes.

Landscape Area Name	Total Acres	Total Acres: Fire Adapted	Oak-Hickory	Pine-Oak-Heath	Shortleaf Pine-Oak	High Elevation Red Oak
Balsam Mountains	235,582	96,806 (41%)	56,053 (58%)	7,634 (8%)	51 (.1%)	33,068 (34%)
Central Escarpment	425,160	230,526 (57%)	133,265 (58%)	55,636 (24%)	38,072 (2%)	3,553 (2%)
Nantahala Mountains	625,044	276,156 (44%)	195,086 (71%)	47,054 (17%)	2,652 (1%)	31,364 (11%)
New River Headwaters	94,762	54,767 (58%)	49,339 (90%)	1,704 (3%)	0 (0%)	3,723 (7%)
Great Smoky and Unaka Mountains	1,559,161	552,464 (49%)	265,534 (48%)	214,940 (39%)	10,334 (2%)	61,664 (11%)
S. Blue Ridge Escarpment	867,413	337,397 (52%)	230,336 (68%)	9,988 (3%)	100,885 (30%)	1,603 (1%)
South Mountains	216,668	189,393 (87%)	47,103 (25%)	25,374 (13%)	116,916 (62%)	0 (0%)
Totals	4,023,790	1,737,509 (52%)	976,716 (56%)	362,330 (21%)	268,910 (16%)	134,975 (8%)

Step 3. Partners developed implementation plans for Focal Areas within the FLN Landscapes. These plans identified objectives and timelines as well as barriers and solutions.

Step 4. Follow through – Burns are implemented; fire effects data will be analyzed & shared

Step 5. Partners reconvene to share successes and lessons learned with other FLN members, thereby enhancing learning and facilitating future success.

Step 6. Explore where restoration can be expanded from focal areas to the larger landscapes and partner with the Appalachian Science Consortium to bring the best current science to the work.

Partners

The Southern Blue Ridge Network is engaging more than 20 entities in four states in a process that accelerates the restoration of landscapes that depend on fire to sustain native plants and animals. Partners include but are not limited to:

State agencies including Forestry, Wildlife Resources, Parks & Recreation and others

The Nature Conservancy, Land Trust for the Little Tennessee, Wildlaw

National Park Service (Great Smoky Mountains NP and Blue Ridge Parkway)

US Forest Service (Nantahala, Pisgah, Cherokee and Chattahoochee NFs & Southern Research Station

US Fish and Wildlife Service

Universities (University of Tennessee, Texas A&M, Western Carolina University)
