# Human Well-Being (HWB)

“Human well-being comprises **multiple dimensions** that, collectively, provide people with the opportunities to lead a life that they value”.

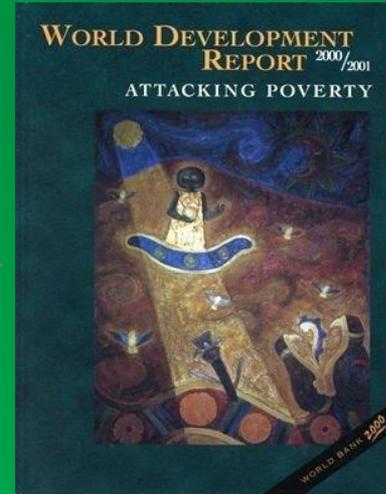

(WWF 2009)

# Economic production to subjective HWB

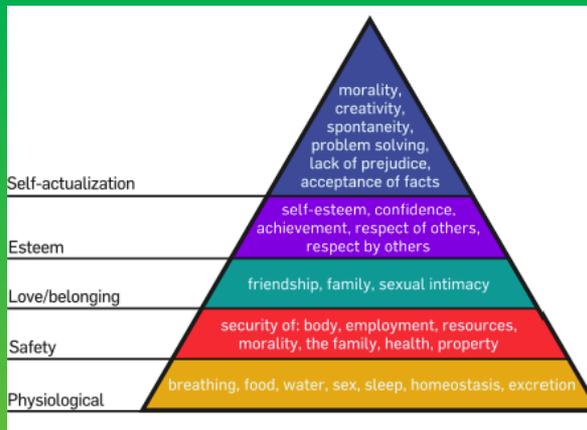

Human Development Index - 1990

World Bank - 2000

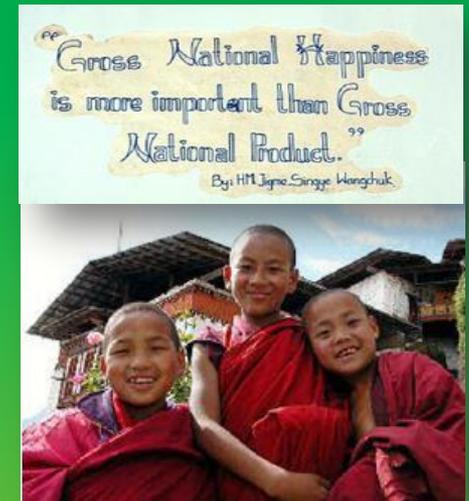

Opportunities  
Security  
Empowerment

Maslow 1943

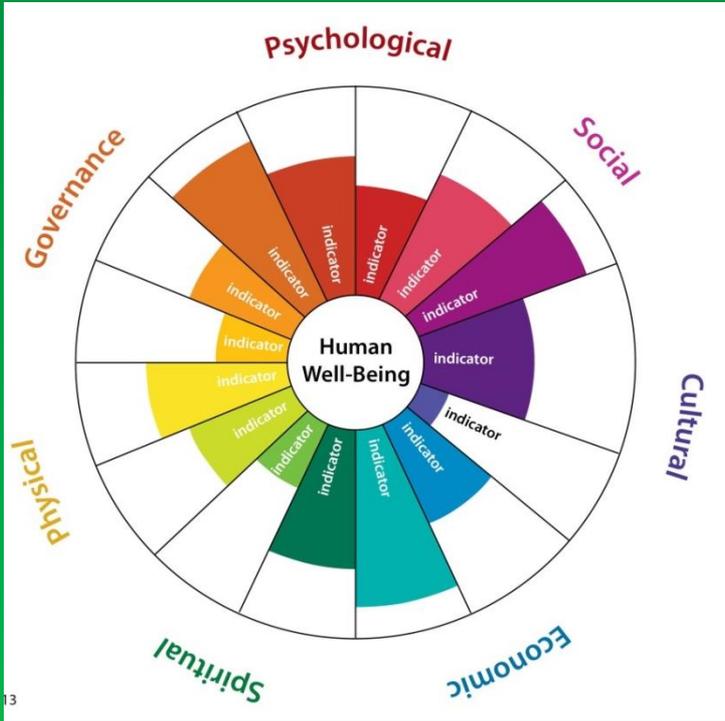

GDP - 1934

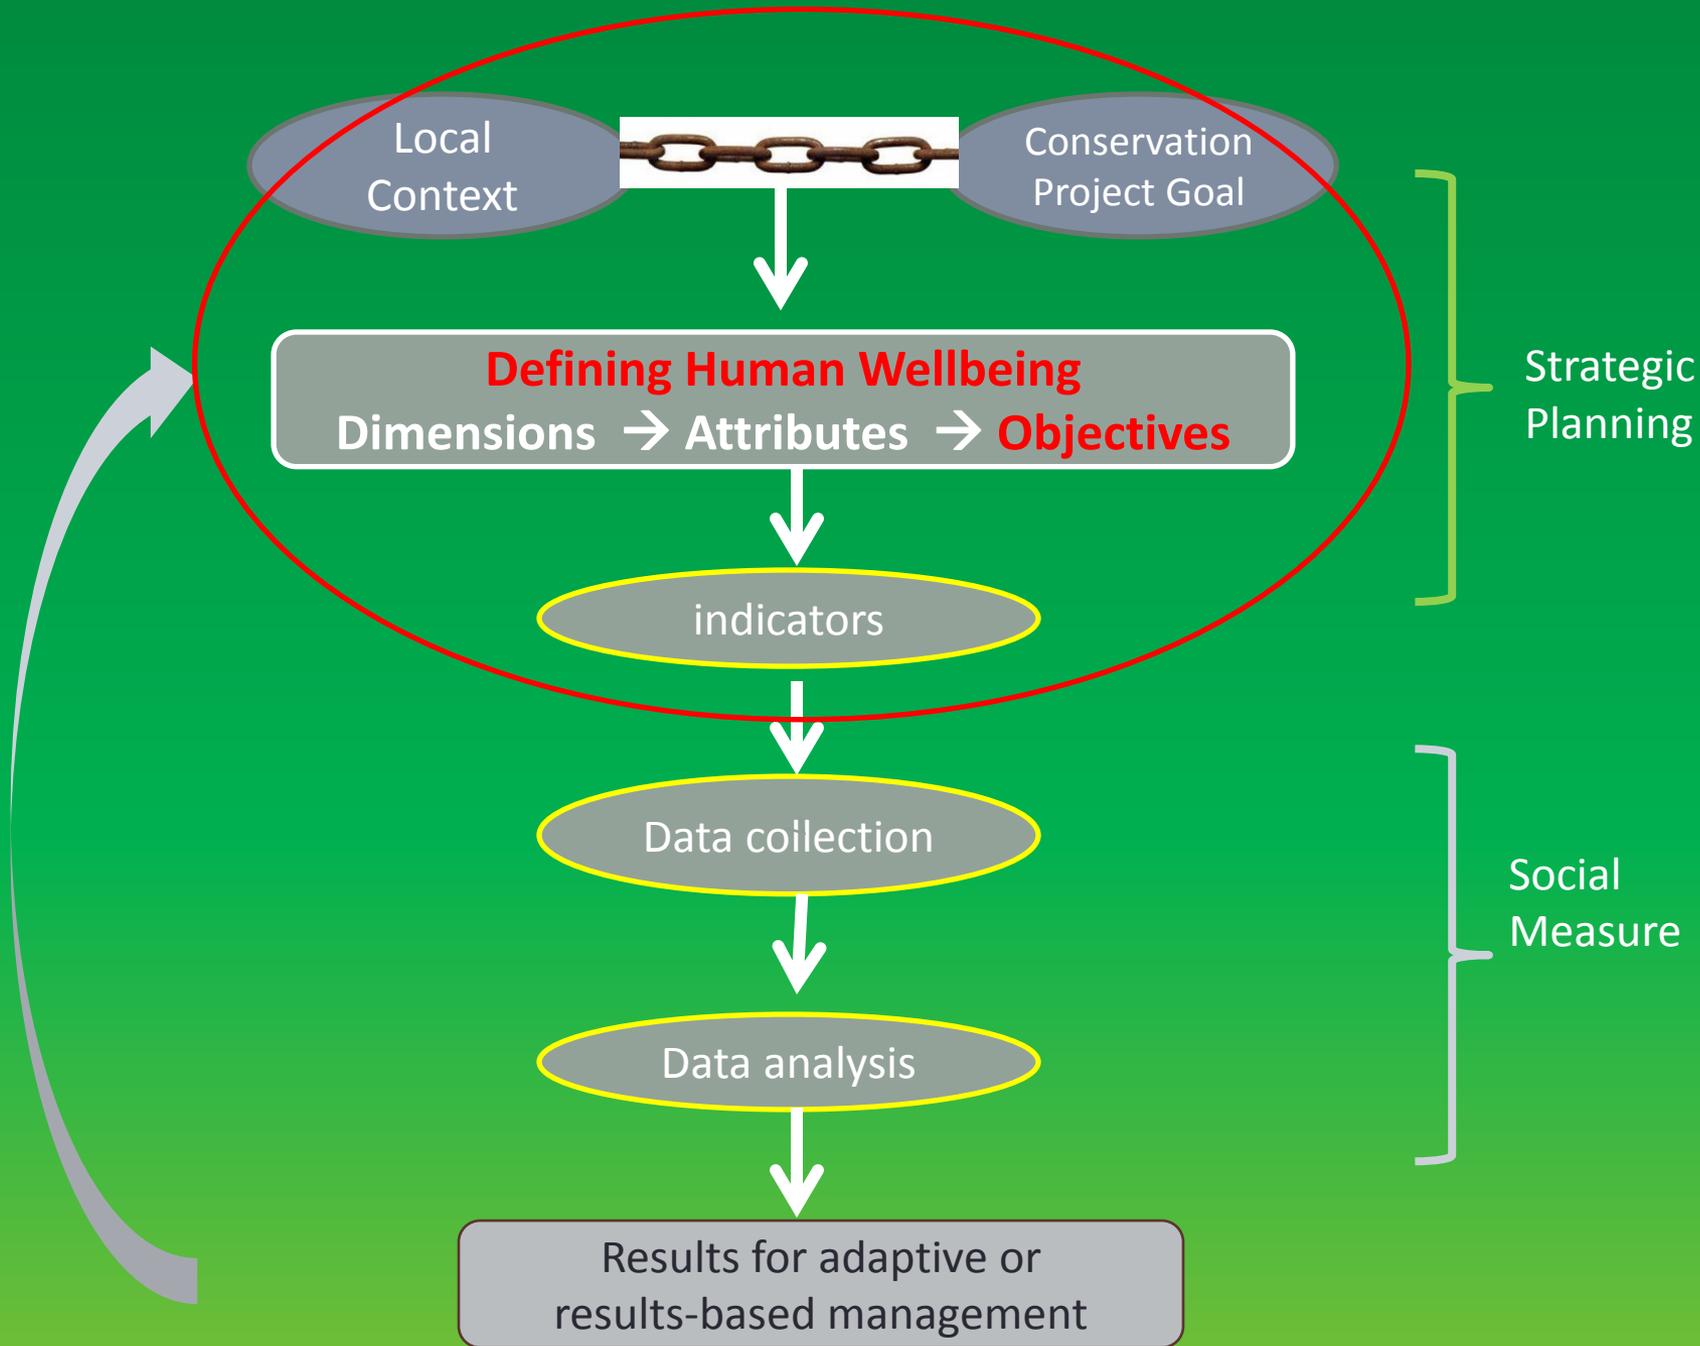

Gross National Happiness  
2010

# Human wellbeing domains (focal areas) based on existing frameworks

- [Australian Unity Well-Being Index](#), [Basic Capabilities Index](#), [BOEM Social Indicators Coastal AK](#), [Canadian Index of Well-Being](#), [Child and Youth Well-Being](#), [Commission on the Measurement of Economic Performance and Social Progress](#), [Commitment to Development Index](#), [Intelligence Unit's QoL Index](#), [EPA Ecosystem Services & HWB European & US Economic Performance & Social Progress](#), [Failed State Index](#), [Healthways Well-Being Index](#), [Gross National Happiness Index](#), [Happy Income Index](#), [Global Peace Index](#), [Happy Planet Index](#), [Hong Kong Living Conditions Measurement Index](#), [Human Poverty Index](#), [Index of Child Well-Being in Europe](#), [Index of Social Health](#), [Indices of Social Development](#), [Millennium Ecosystem Assessment](#), [Multidimensional Poverty Index](#), [Nova Scotia Genuine Progress Index](#), [National Well-Being Index](#), [Better Life Initiative](#), [QoL in Latin America](#), [QoL in New Zealand's Cities](#), [Sustainable Governance Indicators](#), [Social Institutions and Gender Index](#), [Sustainable Society Index](#), [State of the Commonwealth Index](#), [Well-Being of Nations](#), [World Bank Attacking Poverty](#), [WWF Measuring Social Well-being](#)
  - Material living Standards/economic wellbeing

Biedenweg et al, in prep. What is human wellbeing and how does it relate to ecosystem services . PloS One

# Suggested steps to identify HWB objectives

social safeguard principles

**Step 1:** Identify most important human wellbeing **domain** (general areas) and **attributes** (specific aspects) most relevant to the target stakeholder group(s)

**Step 2:** Find **link** of human wellbeing aspects that can be contributed or attributed by REDD program

**Step 3:** Develop human wellbeing **objectives** based on identified attributes with strong links

**Step 4:** Revise and refine objectives taking our **capacities**, and **gaps** into consideration

# Social safeguard principles

# Most Common Safeguard Principles

Principles	REDD+ SES of CCBA and Care	SESA and ESMF of FCPF	UN-REDD Programme	Cancun Agreement
<b>Broad stakeholder participation</b>	X (indigenous and local communities)	X (indigenous people)	X All activities (indigenous peoples, local communities and vulnerable and marginalized groups)	X full and effective participation (indigenous peoples and local communities)
<b>free, prior, and informed consultation</b>	X (protocol designed and agreed by stakeholder reps from beginning)	X	X	
<b>Transparency &amp; accountability</b>	X Measures to ensure them during whole process. Access to appropriate & accurate information for informed decisions	X disclosure of information	X transparency and accuracy of info and distribution	
<b>Long-term livelihood security, economic &amp; social stakeholders ' wellbeing</b>	X (indigenous Peoples and local communities)		X (most vulnerable and marginalized groups)	X respect knowledge and rights of indigenous peoples and local communities

# Other Safeguard principles

Diagnostics/consultation, social studies/assessments to:

- understand drivers and able to manage social priorities
- Assess social benefits, risks & potential impacts of REDD+ strategies
- inform development, selection and refinement of the REDD+ strategy options

Gender and intergenerationally inclusive

Equitable benefit sharing

Rights to lands, territories, and resources

Contribute to good governance

Consistent with

- development objectives
- objectives of national forest programs and relevant international conventions and agreements

# Applying safeguard principles in developing **human wellbeing** objectives

- “Benefits”: To what extent our objectives address long-term livelihood security, economic and social well-being of target stakeholders?
- “Do no harm” Are we adequately taking into considerations the following?:
  - Indigenous peoples
  - Local communities
  - Marginalized groups
  - Gender
  - Intergenerational issues

# Step 1: Expected results and tools

## Results:

- Potential target stakeholders
- Human wellbeing domains and/or attributes

## Tools:

- Diagnostic research (ground truth if secondary data)
- Local consultation, e.g. focus group or interview
- Stakeholder analysis
- Situation analysis

© Supin Wongbusarakum

© Robert Lalasz

# Step 1: Expected results and tools

## Results:

- Potential target stakeholders
- Human wellbeing domains and/or attributes

## Tools:

- Diagnostic research (ground truth if secondary data)
- Local consultation, e.g. focus group or interview
- Stakeholder analysis
- Situation analysis

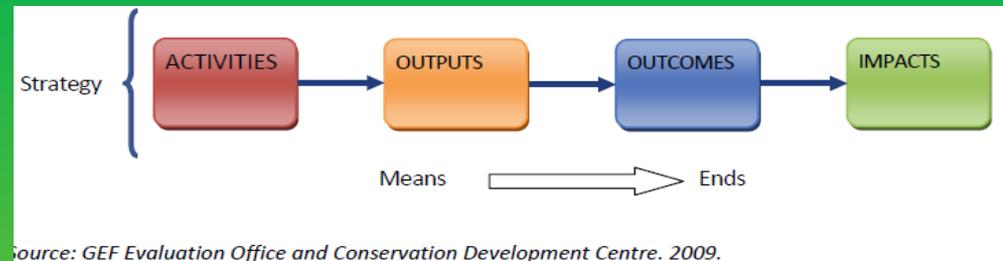

## Step 2: Expected results and tools

### Results:

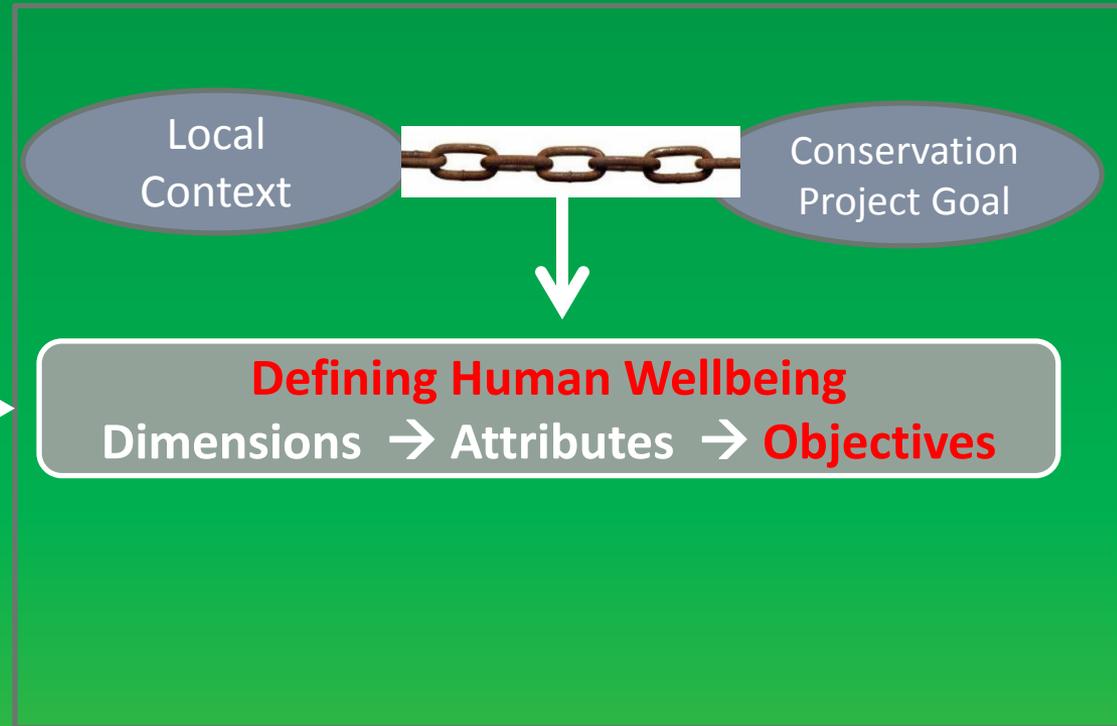

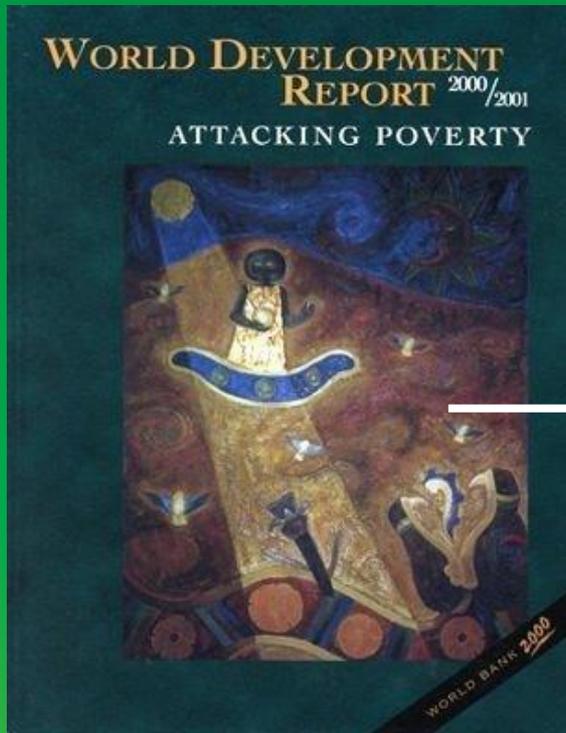

human wellbeing aspects that can be contributed or attributed by REDD program

### Tools:

- Focus group/interview
- Theory of change
- Result chain
- Conceptual model

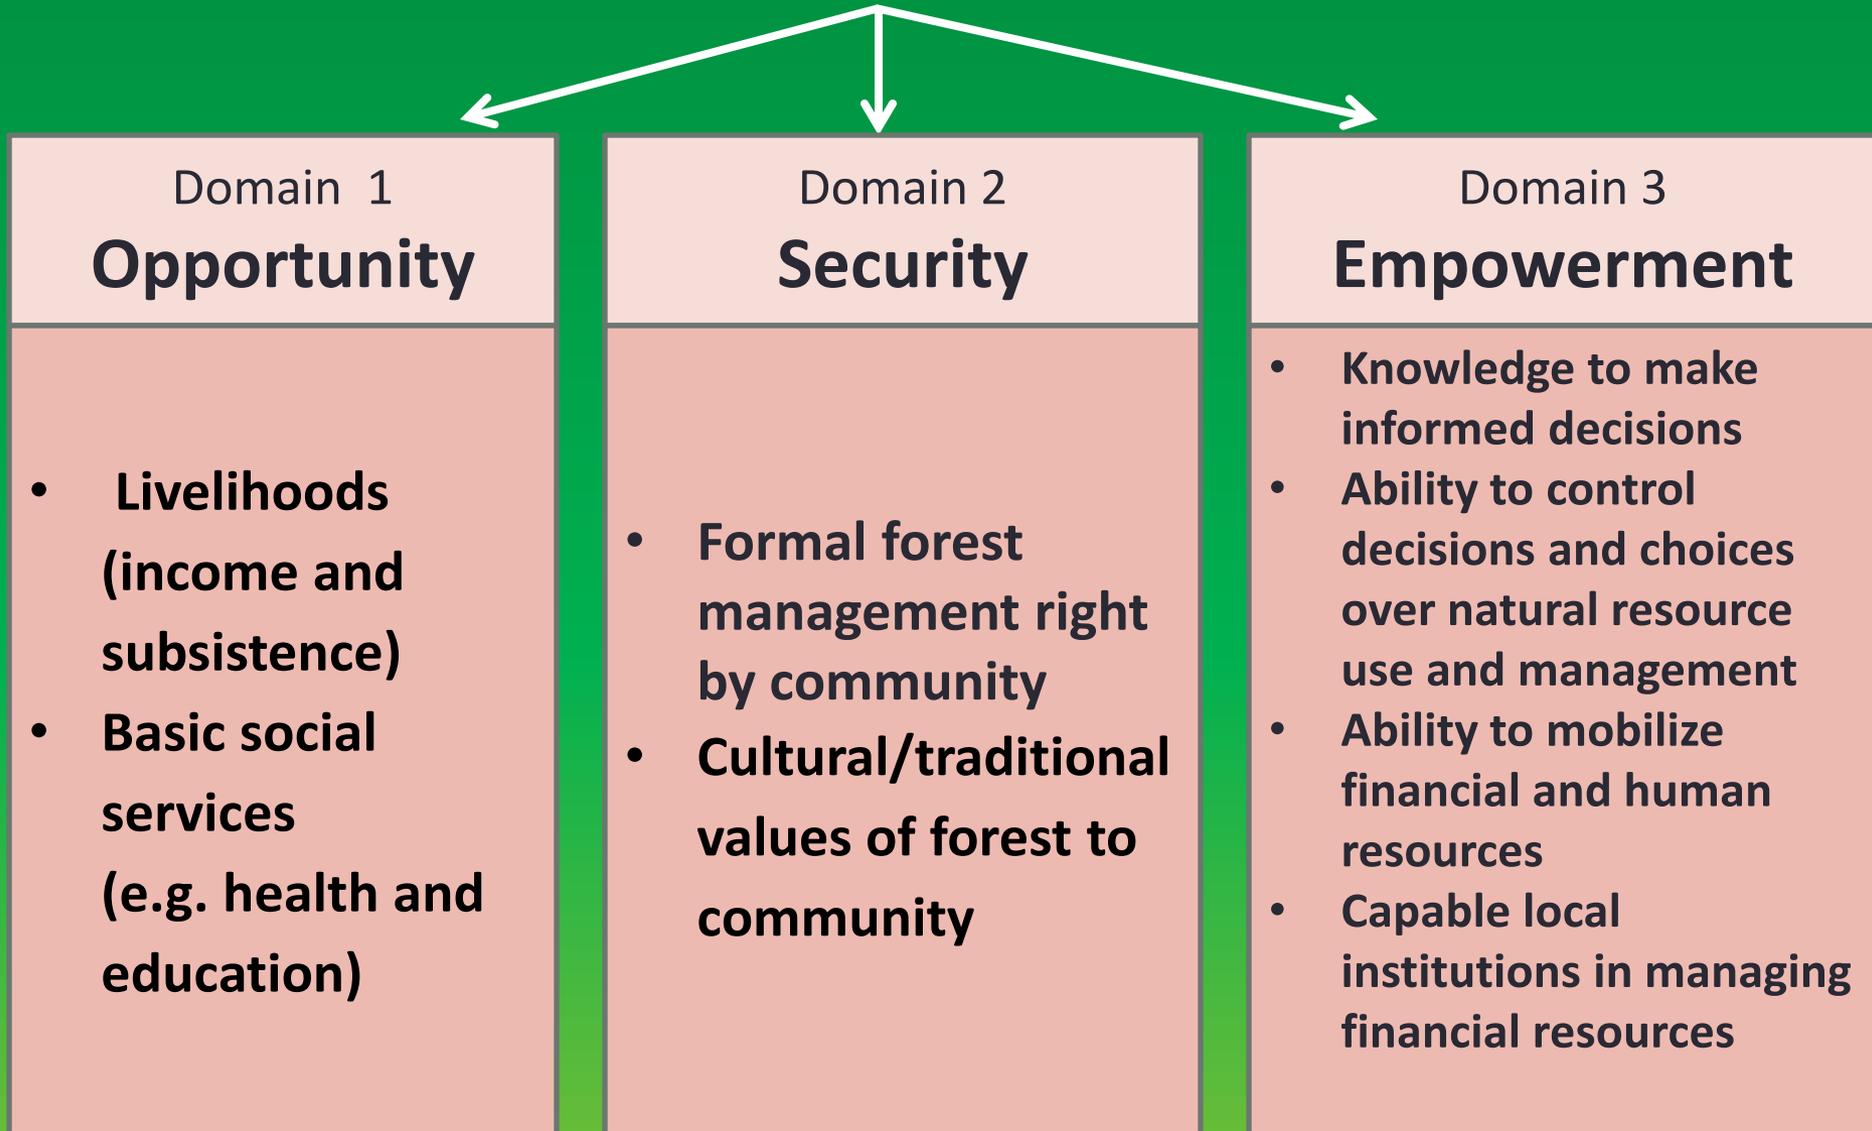

# BFCP Applying World Bank's Attacking Poverty Framework for HWB Domains

**Opportunity**  
**Security**  
**Empowerment**

# Human Well-Being Domains and Attributes, BFCP

## Step 3: Develop HWB objectives based on identified attributes

An **objective** is a statement that details a specific desired outcome of a project.

(National Audubon Society, Tools of Engagement, 2011)

# BFCP example

## HWB Domain and attributes

### Economic Opportunity

- Income and livelihood
- Basic services

## Objective

**By 2015, at least 50% of households in participating villages have increased income and livelihood options**

## Strategy

**Implementation of mitigation activities (providing employment opportunities) and livelihood programs in participating villages that are commensurate with the commitments the villages make to natural resource management**

## Activity

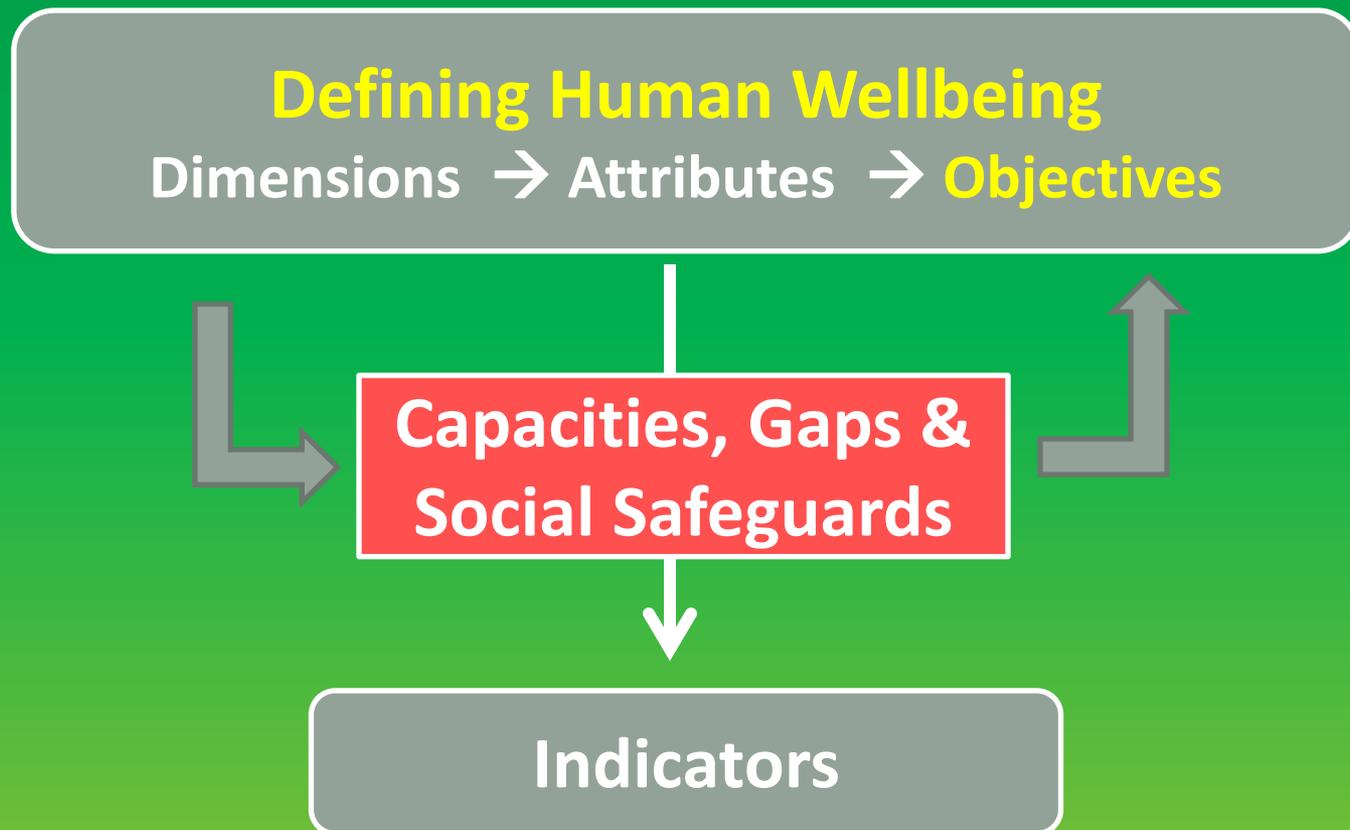

**Provide technical and financial support, and capacity building to communities in undertaking mitigation activities and livelihood programs in participating villages**

# SMART objective criteria met?

**By 2015 at least 50% of households in participating villages in Berau have increased income and livelihood options.**

- **Specific** - says what the project will do and where (increase income and livelihood options of households in Berau)
- **Measurable** - states how many households (at least 50%)
- **Achievable** – project activities have the necessary strategy and activity to support the objective
- **Relevant** - links with the program goal to conserve forest and important for communities who want to increase income and secure their livelihood opportunities
- **Time-bound** - indicates that this will happen by 2015.

# Step 4: revise and refine objectives and strategies based on capacities, gaps, and social safeguards

# Indicator

A quantitative or qualitative factor or variable that provides a simple and reliable means to measure and monitor changes of a specific aspect of human wellbeing outcome.

(Adapted from OECD/DAC, 2002)

# Objective: By 2015 at least 50% of households in participating villages in Berau have increased income and livelihood options.

## Activity

Provide technical and financial support, and capacity building to communities in undertaking mitigation activities and livelihood programs

## Outputs

- Mitigation-related jobs and alternative livelihoods
- Training courses/ programs

## Outcomes

- Skills and capacities built among communities members
- Increased employment and livelihood opportunities
- Increased income (assets, saving)

## Impacts

- Improved economic wellbeing
- Decreased deforestation and better protected forest

Time

Process

Impact

# Assessing Indicators

- **Locally appropriate** (relevant to local situation, culturally and socially appropriate)
- **Responsive** (sensitive to change and can be measured within the project time)
- **Scientifically Valid** (measures what it is intended to measure)
- **Feasible** (technically possible, reasonable cost, available skills and capacity to collect and analyze data)
- **Practical** (data readily available, easy to use, interpret and communicate)
- **Attributable** (extent to which indicator can be linked to project intervention)

# Assessing Indicators, BFCP Example

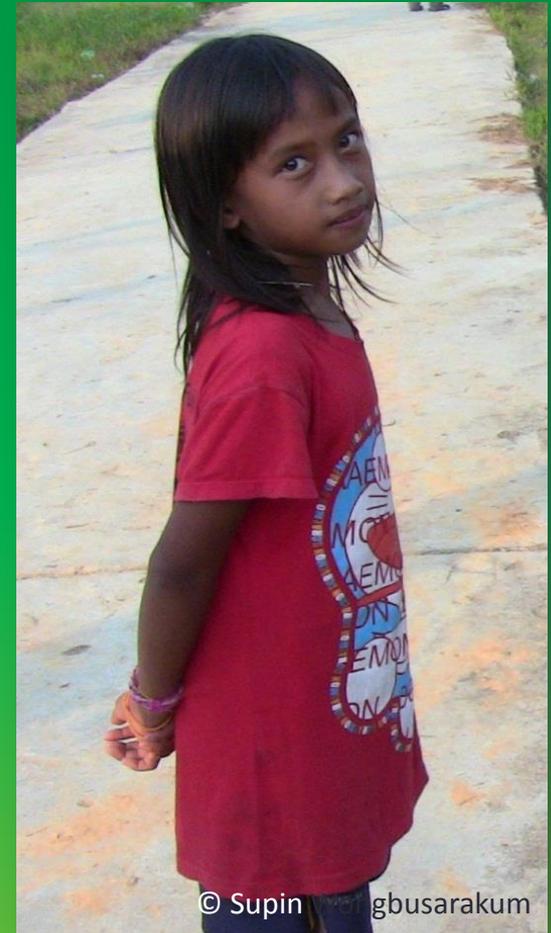

**Objective: By 2015 at least 50% of households in participating villages in Berau have increased income and livelihood options**

	Locally Appropriate	Responsive	Scientifically Valid	Feasible	Practical	Attributable	Total
# of household with mitigation jobs/livelihood opportunities	5	4	5	3	3	5	<b>25</b>
Changes in households' income	4	4	5	3	3	4	<b>23</b>
Changes in households' assets	4	3	5	3	3	3	<b>21</b>
Amount of savings through the Credit Union	4	3	5	5	4	3	<b>24</b>

# BFCP – Opportunity Indicators

Attributes	Indicators
<b>Livelihoods and income</b>	<ul style="list-style-type: none"><li>• % of households with forest protection and REDD+ related employments and other livelihood opportunities</li><li>• Changes in household income</li><li>• Changes in household assets</li><li>• Amount of community saving at credit unions</li></ul>
<b>Basic social services</b>	% of households in participating villages have increased access to basic services attributable to improved forest management practices

# BFCP – Security Indicators

Attributes	Indicators
<b>Formal forest management right by community</b>	<ul style="list-style-type: none"><li>• Hectares of forests allocated by governments for community managed forests.</li><li>• Community perception on the benefits of having formal forest management rights</li><li>• % area of production forests in Berau the communities were given access to by timber companies</li></ul>
<b>Cultural/traditional value of forests for communities</b>	<b>Satisfaction level of communities in maintaining their traditional practices with the forests.</b>

# BFCP – Empowerment Indicators

Attributes	Indicators
<b>Knowledge to make informed decisions</b>	<ul style="list-style-type: none"><li>• <b>Level of community access to information</b></li></ul>
<b>Ability to control decisions and choices over natural resource use &amp; management</b>	<ul style="list-style-type: none"><li>• <b>Confidence level of community in negotiating with other stakeholders</b></li><li>• <b>Satisfaction level of community in controlling decisions and choices</b></li></ul>
<b>Ability to mobilize financial and human resources</b>	<ul style="list-style-type: none"><li>• <b>% increase of funding from different sources secured by villages to support different activities</b></li><li>• <b>Number of villagers with enhanced skills and knowledge</b></li></ul>

# Challenges in developing social objectives and indicators

- Time and coordination
- Team with different areas of expertise
- Compromise due to limited capacity and resources (process vs outcome, method)
- What to measure when

*Thank you*
